Bengaluru, Karnataka | +91 9560075023 | kaveri05sharma@gmail.com | github.com/kaverii11 | linkedin.com/in/kaveri-sharma-aiml | portfolio-kaverii11.vercel.app

EDUCATION

PES University

Bachelor of Technology in Computer Science

Bengaluru

Expected 2027

- Relevant coursework: Operating Systems, Computer Networks, Cloud Computing, Data Structures & Algorithms, Design & Analysis of Algorithms, Computer Architecture & Compiler Design, Database Management Systems

ACHIEVEMENTS

National 2nd Place, AMD Slingshot Challenge

May 2026

- Secured a cash prize of INR 3,00,000, ranking 2nd among 40,000+ registrations and 4,000+ competing prototypes for engineering a highly scalable geospatial AI solution — CityOS

Shortlisted, Atos SRiJAN Hackathon

May 2026

- Ranked among winning teams out of 500+ participants, earning direct internship consideration for building a customer support orchestration platform — OptiSolve

PROJECTS

BreakRadar | Python, FastAPI, Groq

github.com/kaverii11/BreakRadar

- Engineered an autonomous reconciliation agent (FastAPI) that acts on errors before they become financial risk, instead of requiring a human to babysit a dashboard — reconciles two independent trade feeds, auto-classifies mismatches into 5 break types, and scores severity from real-time \$ exposure
- Built a rule-based escalation engine that routes high-risk breaks to human review with an auto-generated justification and logs a timestamped audit trail for every auto-resolved case; surfaces live risk indicators on a dashboard where an LLM (Groq) translates each verdict into plain English
- Built a live risk dashboard showing total \$ exposure, breaks by type, and case aging (how long an error has sat unresolved) — a working FastAPI app tested end-to-end against 300 synthetic trades, not a notebook prototype

OptiSolve | React, FastAPI, ChromaDB, Groq/SambaNova

github.com/kaverii11/Optisolve

- Developed a 3-tier customer support orchestration platform (React, FastAPI) routing tickets across auto-resolve, AI-assisted, and escalate tiers based on AI confidence scores and real-time sentiment analysis
- Designed a RAG pipeline (ChromaDB, Groq Llama 3.3 for drafts, SambaNova/Llama 3.1 for sentiment scoring) that learns from every human correction — cutting average resolution time (MTTR) 30–40%
- Applied the same confidence-threshold model to pre-submission drafts, surfacing fix suggestions to the customer before a ticket is even created

CityOS (Spatial Logistics Engine) | Python, React, NetworkX, Sentinel-2, OSM

github.com/kaverii11/Spatial-Engine

- Built CityOS, an engine that measures how fairly public facilities (schools, clinics) are distributed across a city using real Dijkstra shortest-path routing over live geospatial street maps (not straight-line estimates) — users can search and simulate any city worldwide via OpenStreetMap geocoding
- Deployed a live dashboard where recommended facility placements respect a real budget cap (INR 10–150 Cr) and target the most underserved areas first, generalized beyond schools to healthcare, fire stations, and warehouses
- Backed by a FastAPI + NetworkX/OSMnx + GeoPandas engine and a React/Leaflet frontend — deployed as a live web app, not a notebook prototype

EXPERIENCE

Data & Analytics Engineering Intern

Jun 2025 – Aug 2025

National Capital Region Transport Corporation (NCRTC)

New Delhi (On-site)

- Built and deployed a real-time transport analytics dashboard for the PM e-Bus Sewa initiative, unifying 3+ heterogeneous fleet/ridership sources into a single CMS-integrated UI for NCR stakeholders
- Translated government policy KPIs into interactive visualization workflows, cutting stakeholder time-to-insight from hours to minutes and removing analyst dependency for daily reviews
- **Tech:** Data Visualization, Web Development, CMS Integration

TECHNICAL SKILLS

Languages: C, C++, Python, Java, SQL, JavaScript

Data & ML: Scikit-learn, XGBoost, TensorFlow, Pandas, NumPy

Generative AI & NLP: LLMs, RAG, NLP, Prompt Engineering, Hugging Face

Full Stack & App Integration: Next.js, React, REST APIs, JSON, Data Visualization

Tools & Databases: Git/GitHub, Docker, MySQL, PostgreSQL, Firebase Firestore

LEADERSHIP & ACTIVITIES

Web Development Domain Head

Oct 2024 – Present

Encode AI

- Organized workshops on Emerging AI Tech and Rapid Development Frameworks, democratizing AI skills for 100+ students
